TUV

Model: ADI-1...

- Measuring ranges:
  0,3 - 1,5 ... 35 - 400 l/min water
- Linearity: ± 1% of reading
- p_{max}: 640 bar; t_{max}: 120 (350) °C
- onnection: 1 - 30 mm²/s
- Anschluss: G ¼ ... G 1 ½ female
- Material: stainless steel
- Output: pulses

Model: TUV...

S4

Method of Operation

The TUV model turbines are based on the principle of the Woltmann rotating vane meter. A turbine wheel of negligible mass is concentrically mounted in a pipe and supported by bearings. The liquid flows through the turbine wheel in the axial direction. The medium flow is smoothed by a flow straightener, and reaches the turbine wheel as a quasilaminar flow stream. The speed of the turbine wheel is proportional to the average flow velocity across the pipe cross-section. The rotational speed is thus proportional to the volumetric flow over a wide range.

An inductive transducer screwed into the turbine housing senses the speed of the turbine wheel in a non-contacting manner.

The sensor signal is amplified and converted to produce a pulse signal. The pulse count per time unit is proportional to the actual flow rate.

All turbines are calibrated and delivered with their own calibration reports. Variations in viscosities in your application can be taken into consideration during calibration of the most commonly found viscosities.

Areas of application

Turbine flow rate measuring transducers serve to precisely measure actual flow rates and to meter the flow of liquids of low viscosity.
Examples:

- Fuel
- Liquefied gases
- Solvents
- Light heating oil
- Pharmaceutical liquids
- Tap water and demineralized water

Technical Details

Max. temperature:	-20...+120°C (standard)
	Option: -220°C and +350°C
Viscosity range:	1-30 mm²/s (calibrated for viscosity)
Linearity:	±1 % of reading
Repeatability:	approx. 0.05 %...0.1 %
Response time:	5...50 ms
Recommended filter:	100 μm (to TUV-1205),
	300 μm (from TUV-1206)

Material:

Case/interior sections:	stainless steel 1.4305
Turbine wheel:	stainless steel 1.4122
Bearings:	HM
Auxiliary power:	8.5...29 V_{DC}
Output:	NPN/OC passive, open Collector
Voltage level:	U_{max} 30 V
	$U_{High} > U-(I_{out}$ [mA] x 1,3 kΩ)
	$U_{Low} < 0,6$ V+(I_{out} [mA] x 1,3 kΩ)
Electr. connection:	5-pin amphenol connector

* The tap of the wheel is halved for higher viscosities (>8 mm²/s), K factors and frequencies are thus doubled.
  The free cross section »DN« must remain free when a connection adapter is used.
